IEEE CNF IEE Conference Proceeding

**1. Resilient self-organizing overlay networks for security update delivery**Jun Li; Reiher, P.L.; Popek, G.J.;
Selected Areas in Communications, IEEE Journal on
Volume 22, Issue 1, Jan. 2004 Page(s):189 - 202**Summary:** Rapid and widespread dissemination of security updates throughout the Internet is invaluable for many purposes, including sending early-warning signals, updating certificate revocation lists, distributing new virus signatures, etc. Notifying a large number of hosts is a challenge.[AbstractPlus](#) | [References](#) | Full Text: [PDF\(432 KB\)](#) IEEE JNL**2. An application of efficient certificate status handling methods to high traffic authentication services**Faldella, E.; Prandini, M.;
Computers and Communication, 2003. (ISCC 2003). Proceedings. Eighth IEEE International Conference on
2003 Page(s):821 - 827 vol.2**Summary:** Most organizations show a strong interest in digital signature technology as a secure and authenticated document exchange, hoping that it helps reduce the paper-based transactions. The main problem posed by this technology is with the need for a secure and authenticated document exchange, hoping that it helps reduce the paper-based transactions. The main problem posed by this technology is with the need for a secure and authenticated document exchange, hoping that it helps reduce the paper-based transactions.[AbstractPlus](#) | Full Text: [PDF\(1562 KB\)](#) IEEE CNF**3. Performance evaluation of public-key certificate revocation system with balanced trees**Kikuchi, H.; Abe, K.; Nakanishi, S.;
Parallel Processing, 1999. Proceedings. 1999 International Workshops on
21-24 Sept. 1999 Page(s):204 - 209**Summary:** A new method for updating certificate revocation trees (CRT) is proposed. In this method, the revocation of public-key certificates is a current issue in public-key infrastructure because the current certificate revocation list uses a large amount of bandwidth.[AbstractPlus](#) | Full Text: [PDF\(180 KB\)](#) IEEE CNF**4. A test-bed for certificate revocation policies**Munoz, J.L.; Forne, J.; Esparza, O.; Soriano, M.;
Communications, Computers and signal Processing, 2003. PACRIM. 2003 IEEE Pacific Rim Conference on
Volume 2, 28-30 Aug. 2003 Page(s):561 - 564 vol.2**Summary:** The public-key cryptography is widely used as the cryptographic basis for many services. The PKI is the infrastructure that supports the public-key cryptography and the management of certificates implies one of its major costs. The goal of this work is to develop a test-bed for certificate revocation policies.[AbstractPlus](#) | Full Text: [PDF\(423 KB\)](#) IEEE CNF
